## Database Systems

(資料庫系統)

12/5/2022 Database #2 Introduction to Computer (計算機概論)

Winston Hsu, NTU

1

### Administrative Matters

- HW#8 (SQL queries) due on December
   12, 2022 (12pm, Wednesday)
- Final exam on December 19, 2022
  - Range: Python programming (lecture 9) -Database (II) (Lecture 15)

### Reflection: DB design

- Step I: Requirements Analysis
  - What data to store in the database?
- Step 2: Conceptual Database Design
  - Come up with the design: Entity-Relation (ER) model
  - Sketch the design with ER diagrams
- Step 3: Logical Database Design
  - Implement the design: relational data model
  - Map ER diagrams to relational tables

3

### Example Table Definitions

Sailors(<u>sid</u>: integer, sname: string, rating: integer, age: real)

Boats(<u>bid</u>: integer, bname: string, color: string)
Reserves(<u>sid</u>: integer, <u>bid</u>: integer, <u>day</u>: date)

# SQL: Queries, Constraints, Triggers

Chapter 5

5

### Lecture Outline

- Basic Query
  - SELECT
- Set Constructs
  - UNION, INTERSECT, EXCEPT, IN, ANY, ALL, EXISTS
- Nested Queries
- Aggregate Operators
  - COUNT, SUM, AVG, MAX, MIN, GROUP BY, HAVING

- Null Values
- Integrity Constraints
  - CHECK, CREATE ASSERTION
- Triggers
  - CREATE TRIGGER, FOR EACH ROW

### Example Table Definitions

Sailors(<u>sid</u>: integer, sname: string, rating: integer, age: real)
Boats(<u>bid</u>: integer, bname: string, color: string)
Reserves(sid: integer, bid: integer, day: date)

Find names of sailors who've reserved boat #103

**SELECT S.sname** 

FROM Sailors S, Reserves R

WHERE S.sid=R.sid AND R.bid=103

7

### Cross-Product

- Each row of S1 is paired with each row of R1.
- Result schema has one field per field of \$1 and \$1, with field names `inherited'
  if possible.

*S1 x R1* 

Conflict: Both S1 and R1 have a field called sid.
 referred to solely by position

<u>sid</u>	sname	rating	age
22	dustin	7	45.0
31	lubber	8	55.5
58	rusty	10	35.0
	D1		

	R1	
<u>sid</u>	<u>bid</u>	<u>day</u>
22	101	10/10/96
58	103	11/12/96

7	(sid)	sname	rating	age	(sid)	bid	day
	22	dustin	7	45.0	22	101	10/10/96
	22	dustin	7	45.0	58	103	11/12/96
1	31	lubber	8	55.5	22	101	10/10/96
	31	lubber	8	55.5	58	103	11/12/96
	58	rusty	10	35.0	22	101	10/10/96
	58	rusty	10	35.0	58	103	11/12/96

8

### Basic SQL Query

SELECT [DISTINCT] target-list FROM relation-list WHERE qualification

- Relation-list: A list of relation names (possibly with range-variable after each name).
- Target-list: A list of attributes of relations in relation-list
- Qualification: conditions on attributes (<, >, =, and, or, not, etc.)
- DISTINCT: optional keyword for duplicate removal.
  - Default = no duplicate removal!

9

## How to evaluate a query?

SELECT [DISTINCT] target-list

FROM relation-list

WHERE qualification

- Conceptual query evaluation using relational operators:
  - I) Compute the cross-product of relation-list.
  - 2) Discard resulting tuples if they fail qualifications.
  - 3) Delete attributes that are not in target-list. (called column-list)
  - 4) If DISTINCT is specified, eliminate duplicate rows.
- Only conceptual because of inefficiency computation
  - An optimizer can find better strategy

**SELECT S.sname** 

FROM Sailors S, Reserves R

WHERE S.sid=R.sid AND R.bid=103

### Example of Conceptual Evaluation (1)

X

SELECT S.sname
FROM Sailors S, Reserves R
WHERE S.sid=R.sid AND R.bid=103

(1) Compute the cross-product of relation-list.

### Sailors

<u>sid</u>	sname	rating	age
22	dustin	7	45.0
31	lubber	8	55.5
58	rusty	10	35.0

#### Reserves

sid	bid	day
22	101	10/10/96
58	103	11/12/96

11

### Example of Conceptual Evaluation (2)

SELECT S.sname FROM Sailors S, Reserves R WHERE S.sid=R.sid AND R.bid=103 (2) Discard tuples if they fail qualifications.

### Sailors X Reserves

(sid)	sname	rating	age	(sid)	bid	day
22	dustin	7	45.0	22	101	10/10/96
22	dustin	7	45.0	58	103	11/12/96
31	lubber	8	55.5	22	101	10/10/96
31	lubber	8	55.5	58	103	11/12/96
58	rusty	10	35.0	22	101	10/10/96
58	rusty	10	35.0	58	103	11/12/96

### Example of Conceptual Evaluation (3)

#### **SELECT S.sname**

FROM Sailors S, Reserves R
WHERE S.sid=R.sid AND R.bid=103

(3) Delete attribute columns that not in target-list.

#### Sailors X Reserves

(sid)	sname	rating	age	(sid)	bid	day
22	dustin	7	45.0	22	101	10/10/96
22	dustin	7	45.0	58	103	11/12/96
31	lubber	8	55.5	22	101	10/10/96
31	lubber	8	55.5	58	103	11/12/96
58	rusty	10	35.0	22	101	10/10/96
58	rusty	10	35.0	58	103	11/12/96

### A Note on Range Variables

SELECT S.sname

FROM Sailors as **S**, Reserves **R**WHERE S.sid=R.sid AND bid=103

OR

SELECT sname

FROM Sailors, Reserves

WHERE Sailors.sid=Reserves.sid AND bid=103

 Really needed range variables only if the same relation appears twice in the FROM clause. SELECT sname

FROM Sailors S, Reserves R1,

Reserves R2

WHERE S.sid = R1.sid AND S.sid = R2.sid AND

S.SIG = RZ.SIG AINL R1.bid <> R2.bid

# Find the sids of sailors who've reserved at least one boat

SELECT S.sid

FROM Sailors S, Reserves R

WHERE S.sid=R.sid

Sailors X Reserves

(sid)	sname	rating	age	(sid)	bid	day
22	dustin	7	45.0	22	101	10/10/96
22	dustin	7	45.0	58	103	11/12/96
31	lubber	8	55.5	22	101	10/10/96
31	lubber	8	55.5	58	103	11/12/96
58	rusty	10	35.0	22	101	10/10/96
58	rusty	10	35.0	58	103	11/12/96

### DISTINCT

- Find the names and ages
   of all sailors
   SELECT S.sname, S.age
   FROM Sailors S
- Add DISTINCT to this query?
- Replace S.sname by S.sid in the SELECT clause?
- Add DISTINCT to the above?

Sid	Sname	Rating	Age
22	Dustin	7	45.0
29	Brutus	I	33.0
31	Lubber	8	55.5
32	Andy	8	25.5
58	Rusty	10	35.0
64	Horatio	7	35.0
71	Zorba	10	16.0
74	Horatio	9	35.0
85	Art	3	25.5
95	Bob	3	63.5

# Find sailors whose names begin and end with B and contain at least three characters.

SELECT S.age, age I = S.age-5, 2\*S.age AS age2

FROM Sailors S

WHERE S.sname LIKE 'B\_%B'

- AS and = are two ways to name fields in result.
- LIKE for string matching.
  - `\_' for one character
  - `%' for 0 or more characters.

Sid	Sname	Rating	Age
22	Dustin	7	45.0
29	Brutus	1	33.0
31	Lubber	8	55.5
74	Horatio	9	35.0
85	Art	3	25.5
95	Bob	3	20

Age	Age I	Age2
20	15	40

17

# Find sid's of sailors who've reserved a red or a green boats.

FROM Sailors S, Boats B, Reserves R
WHERE S.sid=R.sid AND R.bid=B.bid
AND (B.color='red' OR B.color='green')

• UNION: work on two union-compatible sets of tuples

SELECT S.sid

FROM Sailors S, Boats B, Reserves R

WHERE S.sid=R.sid AND R.bid=B.bid AND B.color='red'

**UNION** 

SELECT S.sid

FROM Sailors S, Boats B, Reserves R

WHERE S.sid=R.sid AND R.bid=B.bid AND B.color='green'

Replace OR by AND in the first version?

# Find sid's of sailors who've reserved a red and a green boat

SELECT S.sid

FROM Sailors S, Boats B, Reserves R

WHERE S.sid=R.sid AND R.bid=B.bid AND B.color='red'

INTERSECT

SELECT S.sid

FROM Sailors S, Boats B, Reserves R

WHERE S.sid=R.sid AND R.bid=B.bid AND B.color='green'

- What do we get if we replace INTERSECT by EXCEPT?
  - (A Except B) returns tuples in A but not in B.
  - Find sids of all sailors who have reserved a red boat but not a green boat.

19

### SET Construct: UNION ALL

- UNION, INTERSECT, and EXCEPT delete duplicate by default. (why?)
- To retain duplicates, use UNION ALL, INTERSECT ALL, or EXCEPT ALL.

Sid	Sname
71	Zorba
74	Horatio
74	Horatio
95	Bob

INTERSECT ALL

Sid	Sname
22	Dustin
71	Zorba
74	Horatio
74	Horatio

Sid	Sname
71	Zorba
74	Horatio
74	Horatio

## Prior Knowledge: A Predictive Database For Developers

 http://techcrunch.com/2012/09/11/prior-knowledge-a-predictive-databasefor-developers/

#### Step 1: Understand the data

Take a quick look at the contents of the bank-data.csv file to familiarize yourself with the dataset.

- · 600 rows of customer data
- 7 demographic columns
- · One column per financial product available for purchase
  - · Savings account ( save\_act )
  - . Checking account ( current\_act )
  - Mortgage (mortgage)
  - Personal equity plan (pep)
- Many missing values not all values are known for all customers

age	sex	region	income	married	children	car	save_act	current_act	mortgage	рер
22	Male	Rural	8877.07	False	2	False	False	True	False	True
37	Female	Suburban	25304.3	True	2	True	False	False	-	False
66	Female	-	1141	-	1	True	True	True	True	True
19	Male	Rural	10953.0	True	3	True	True	True	-	False
-	Male	Inner City		-	-	True	True	True	True	False

### **Nested Queries**

- WHERE clause can itself contain an SQL subquery. (Actually, so can FROM and HAVING clauses.)
- Find names of sailors who've reserved boat #103:

SELECT S.sname FROM Sailors S

WHERE S.sid IN (SELECT R.sid

FROM Reserves R WHERE R.bid=103) Subquery: finds sids who have reserved bid 103

- (x IN B) returns true when x is in set B.
  - To find sailors who've not reserved #103, use NOT IN.
- Nested loops Evaluation
  - For each Sailors tuple, check the qualification by computing the subquery.
  - Does the subquery result change for each new Sailor row?

### Nested Queries with Correlation

SELECT S.sname FROM Sailors S WHERE EXISTS (SELECT \*

Correlation: subquery finds all reservations for bid 103 from current sid

WHERE R.bid=103 AND S.sid=R.sid ) • EXISTS is another set comparison operator, like IN.

- (EXISTS S) returns true when S is not empty.

FROM Reserves R

- What is the above query in English?
  - Find sailors who have reserved boat #103
- In case of correlation, subquery must be re-computed for each Sailors tuple.

23

### Nested Queries with UNIQUE

Sailors(sid: integer, sname: string, rating: integer, age: real) Boats(bid: integer, bname: string, color: string) Reserves(sid: integer, bid: integer, day: date)

(UNIQUE S) returns true if S has no duplicate tuples or S is empty.

SELECT S.sname FROM Sailors S WHERE UNIQUE (SELECT R.bid

FROM Reserves R WHERE R.bid=103 AND S.sid=R.sid)

- What is the above query in English?
  - Finds sailors with at most one reservation for boat #103.
- Replace R.bid with \*?
  - Finds sailors with at most one reservation for boat #103 in a given day.
  - (Simplify -> find all sailors)

### More on Set-Comparison Operators

- Have seen IN, EXISTS and UNIQUE. Can also use NOT IN, NOT EXISTS, and NOT UNIQUE.
- Also available: op ANY, op ALL, where op can be >, <, =,  $\neq$ ,  $\leq$ ,  $\geq$ 
  - -(a > ANY B) returns true when a is greater than any one element in set B.
  - (a > ALL B) returns true when a is greater than all elements in set B.

SELECT \* FROM Sailors S

WHERE S.rating > ANY (SELECT S2.rating

FROM Sailors S2

WHERE S2.sname='Horatio')

- What is the above query in English?
  - Find sailors whose rating is greater than that of some sailor called Horatio.
- What is the above query in English if > ANY is replaced by > ALL?
  - Find sailors whose rating is greater than all sailors called Horatio.

25

### Find sid's of sailors who've reserved a red and a green boat

SELECT S.sid FROM Sailors S. Boats B. Reserves R WHERE S.sid=R.sid AND R.bid=B.bid AND B.color='red' **INTERSECT** SELECT S.sid FROM Sailors S. Boats B. Reserves R. WHERE S.sid=R.sid AND R.bid=B.bid AND B.color='green'

- Rewrite INTERSECT with IN.
  - Strategy?

### Rewriting INTERSECT Using IN

SELECT S.sid

FROM Sailors S, Boats B, Reserves R

WHERE S.sid=R.sid AND R.bid=B.bid AND B.color='red'

AND S.sid IN (SELECT S2.sid

FROM Sailors S2, Boats B2, Reserves R2

WHERE S2.sid=R2.sid AND R2.bid=B2.bid served AND B2.color='green')

Find sids who've reserved a green boat

- Find sid's of Sailors who've reserved red but not green boats (EXCEPT)
  - Replace IN with NOT IN.

27

### Aggregate Operators

- COUNT (\*)
- COUNT ([DISTINCT] A)
  - A is a column
- SUM ([DISTINCT] A)
- AVG ( [DISTINCT] A)
- MAX (A)
- MIN (A)
- Count the number of sailors

SELECT COUNT (\*) FROM Sailors S

# Find the average age of sailors with rating = 10

Sailors(<u>sid</u>: integer, sname: string, rating: integer, age: real)

SELECT AVG (S.age) FROM Sailors S WHERE S.rating=10

29

# Count the number of different sailor names

Sailors(<u>sid</u>: integer, sname: string, rating: integer, age: real)

SELECT COUNT (DISTINCT S.sname) FROM Sailors S

## Find the age of the oldest sailor

Sailors(<u>sid</u>: integer, sname: string, rating: integer, age: real)

SELECT MAX(S.AGE) FROM Sailors S

31

# Find name and age of the oldest sailor(s)

SELECT S.sname, MAX (S.age) FROM Sailors S

- This is illegal, but why?
  - Cannot combine a column with a value (unless we use GROUP BY)

SELECT S.sname, S.age FROM Sailors S

WHERE S.age = (SELECT MAX (S2.age) FROM Sailors S2)

- Okay, but not supported in every system
  - Convert a table (of a single aggregate value) into a single value for comparison

### GROUP BY and HAVING

- So far, aggregate operators are applied to all (qualifying) tuples.
  - Can we apply them to each of several groups of tuples?
- Example: find the age of the youngest sailor for each rating level.
  - In general, we don't know how many rating levels exist, and what the rating values for these levels are!
  - Suppose we know that rating values go from 1 to 10; we can write 10 queries that look like this:

For i = 1, 2, ..., 10:

SELECT MIN (S.age) FROM Sailors S WHERE S.rating = i

# Find the age of the youngest sailor for each rating level

**(2)** 

SELECT S.rating, MIN (S.age) as age FROM Sailors S GROUP BY S.rating

- (1) The sailors tuples are put into "same rating" groups.
- (2) Compute the Minimum age for each rating group.

Sid	Sname	Rating	Age
22	Dustin	7	45.0
31	Lubber	8	55.5
85	Art	3	25.5
32	Andy	8	25.5
95	Bob	3	63.5

Rating	Age
3	25.5
7	45.0
8	25.5

Rating	Age
3	25.5
3	63.5
7	45.0
8	55.5
8	25.5

(1)

34

# Find the age of the youngest sailor for each rating level that has at least 2 members

SELECT S.rating, MIN (S.age) as age FROM Sailors S GROUP BY S.rating HAVING COUNT(\*) > I

- 1. The sailors tuples are put into "same rating" groups.
- Eliminate groups that have < 2 members.</li>
- 3. Compute the Minimum age for each rating group.

Sid	Sname	Rating	Age
22	Dustin	7	45.0
31	Lubber	8	55.5
85	Art	3	25.5
32	Andy	8	25.5
95	Bob	3	63.5

Rating	Age
3	25.5
8	25.5

Rating	Age
3	25.5
3	63.5
7	45.0
8	55.5
8	25.5

### Queries With GROUP BY and HAVING

SELECT [DISTINCT] target-list

FROM relation-list

WHERE qualification GROUP BY grouping-list

HAVING group-qualification

SELECT S.rating, MIN (S.age) as age

FROM Sailors S
GROUP BY S.rating
HAVING S.rating > 5

- The target-list contains (i) attribute names (ii) terms with aggregate operations (e.g., AVG (S.age)).
- The attribute list (e.g., S.rating) in target-list must be in grouping-list.
- The attributes in group-qualification must be in grouping-list.

### Say if Attribute list is not in grouping-list

SELECT S.sname, S.rating, AVG
(S.age) as age
FROM Sailors S
GROUP BY S.rating
HAVING COUNT(\*) > 1

Sid	Sname	Rating	Age
22	Dustin	7	45.0
31	Lubber	8	55.5
<i>85</i>	Art	3	25.5
32	Andy	8	25.5
95	Bob	3	63.5

Sname	Rating	Age
?	3	44.5
?	8	40.5

Sname	Rating	Age
Art	3	25.5
Bob	3	63.5
Dustin	7	45.0
Lubber	8	55.5
Andy	8	25.5

37

### Say if Group qualification is not in grouping-list

SELECT S.rating, AVG (S.age) as age FROM Sailors S Not in GROUP BY S.rating group-list HAVING S.sname \neq 'Dustin'

Sid	Sname	Rating	Age
22	Dustin	7	45.0
31	Lubber	8	55.5
85	Art	3	25.5
32	Andy	8	25.5
95	Bob	3	63.5

Rating	Age

Sname	Rating	Age
Art	3	25.5
Bob	3	63.5
Dustin	7	45.0
Lubber	8	55.5
Andy	8	25.5

38

### Conceptual Evaluation

- Without GROUP BY and HAVING:
  - Compute cross-product of relation-list
  - Remove tuples that fail qualification
  - Delete unnecessary columns
- With GROUP BY and HAVING, continue with
  - Partition remaining tuples into groups by the value of attributes in grouping-list (specified in GROUP-BY clause)
  - Remove groups that fail group-qualification (specified in HAVING clause).
  - Compute one answer tuple per qualifying group.

39

# For each red boat, find the number of reservations for this boat

SELECT B.bid, COUNT (\*) AS num\_reservations FROM Boats B, Reserves R WHERE R.bid=B.bid AND B.color='red' GROUP BY B.bid SELECT B.bid, COUNT (\*) AS num\_reservations FROM Boats B, Reserves R WHERE R.bid=B.bid GROUP BY B.bid HAVING B.color='red'

- Illegal, why?
  - B.color does not appear in group-list

## Find the age of the youngest sailor with age > 18 for each rating with at least 2 sailors (of any age)

SELECT S.rating, MIN (S.age) FROM Sailors S WHERE S.age > 18 GROUP BY S.rating HAVING COUNT(S) > 1

- What is wrong?
  - COUNT(S) is counting tuples after the qualification (S.age > 18).
  - Eliminate groups, which have multiple sailors but only one sailor with age > 18.

- How to fix it?
  - Use subquery in the HAVING clause.

SELECT S.rating, MIN (S.age)
FROM Sailors S
WHERE S.age > 18
GROUP BY S.rating
HAVING
I < ANY (SELECT COUNT (\*)
FROM Sailors S2
WHERE
S.rating=S2.rating)

41

### Table Constraints

- Specify constraints over a single table
  - Useful when more general ICs than keys are involved.

CREATE TABLE Sailors

( sid INTEGER,
 sname CHAR(10),
 rating INTEGER,
 age REAL,
 PRIMARY KEY (sid),
 CHECK ( rating >= 1
 AND rating <= 10 )

CREATE TABLE Reserves

(sname CHAR(10),

bid INTEGER,

The boat 'Interlake' cannot be reserved

Constraints can be named.

day DATE,
PRIMARY KEY (bid,day),
CONSTRAINT noInterlakeRes

CHECK (`Interlake'≠

(SELECT B.bname FROM Boats B WHERE B.bid=bid)))

### Assertions: Constraints Over Multiple **Tables**

CREATE TABLE Sailors

( sid INTEGER,

Number of boats plus number of sailors is < 100

Awkward and wrong!

sname CHAR(10), rating INTEGER,

age REAL,

If Sailors is empty,

PRIMARY KEY (sid),

the number of

**CHECK** 

Boats tuples can

((SELECT COUNT (S.sid) FROM Sailors S)

be anything!

 $+ (SELECT\ COUNT\ (B.bid)\ FROM\ Boats\ B) < 100)$ 

 ASSERTION is the right solution;

not associated

with either table.

CREATE ASSERTION smallClub

CHECK

((SELECT COUNT (S.sid) FROM Sailors S)

 $+ (SELECT\ COUNT\ (B.bid)\ FROM\ Boats\ B) < 100)$ 

43

### Triggers

- Trigger: procedure that starts automatically if specified changes occur to the DBMS
- A trigger has three parts:
  - Event (activates the trigger)
  - Condition (tests whether the triggers should run)
  - Action (what happens if the trigger runs)

CREATE TRIGGER incr\_count AFTER INSERT ON Students // Event WHEN (new.age < 18) // Condition FOR EACH ROW BEGIN // ACTION: a procedure in Oracle's PL/SQL syntax count := count + 1 **END** 

### References

 Deutsch, Donald R., "The SQL Standard: How it Happened," Annals of the History of Computing, IEEE, vol.35, no.2, pp.72,75, April-June 2013

45

### Starwar Exercises

char(<u>name</u>, race, homeworld, affiliation)
planets(<u>name</u>, type, affiliation)
timetable(cname, pname, movie, arrival, departure)

Which planet does Princess Leia go to in movie3?

SELECT distinct pname
FROM timetable
WHERE cname ='Princess Leia' and movie=3

### Starwar Exercises

char(<u>name</u>, race, homeworld, affiliation)
planets(<u>name</u>, type, affiliation)
timetable(cname, pname, movie, arrival, departure)

How many people stay on Dagobah in movie 3?

SELECT count(\*)
FROM timetable, characters
WHERE movie=3 and pname ='Dagobah' and timetable.cname=characters.name and characters.race='Human'

47

### Starwar Exercises

char(name, race, homeworld, affiliation)
planets(name, type, affiliation)
timetable(cname, pname, movie, arrival, departure)

• Who has been to his/her homeworld in movie 2?

FROM characters c, timetable t
WHERE c.name=t.cname and t.pname=c.homeworld and movie=2

### Starwar Exercises

char(name, race, homeworld, affiliation)
planets(name, type, affiliation)
timetable(cname, pname, movie, arrival, departure)

• Find all characters that have been on all planets of rebels.

SELECT name
FROM characters c
WHERE not exists (
SELECT p.name FROM planets p
WHERE affiliation='rebels' and p.name NOT IN
(SELECT pname from timetable t where t.cname=c.name and t.pname=p.name))

49

### Starwar Exercises

char(name, race, homeworld, affiliation)
planets(name, type, affiliation)
timetable(cname, pname, movie, arrival, departure)

• Find distinct names of the planets visited by those of race "droid".

SELECT distinct t.pname
FROM characters c, timetable t
WHERE c.name=t.cname and c.race='droid'

### Starwar Exercises

char(name, race, homeworld, affiliation)
planets(name, type, affiliation)
timetable(cname, pname, movie, arrival, departure)

• For each character and for each neutral planet, how much time total did the character spend on the planet?

SELECT c.name, p.name, SUM(t.departure-t.arrival+1) as amount FROM characters c, timetable t, planets p
WHERE t cname=c name and t pname=p name and p affiliation='n

WHERE t.cname=c.name and t.pname=p.name and p.affiliation='neutral' GROUP BY c.name, p.name

51

### Division in SQL

- Find sailors who've reserved all boats.
- Strategy?
  - Find all boats that have been reserved by a sailor
  - Compare with all boats
  - Do the sailor's reserved boats include all boats?
    - Yes → include this sailor
    - No → exclude this sailor

```
SELECT S.sname
FROM Sailors S
WHERE NOT EXISTS
((SELECT B.bid
FROM Boats B)
EXCEPT
(SELECT R.bid
FROM Reserves R
WHERE R.sid=S.sid))
```

(A EXCEPT B) returns tuples in A but not in

### Division in SQL

- Can you do it the hard way, without EXCEPT & with NOT EXISTS?
- Strategy:
  - For each sailor, check that there is no boat that has not been reserved by this sailor.

SELECT S.sname FROM Sailors S

WHERE NOT EXISTS ( SELECT B.bid

FROM Boats B

WHERE NOT EXISTS ( SELECT

R.bid

FROM Reserves R

WHERE R.bid = B.bid AND R.sid =  $\overline{S.sid}$ 

#### Sailors

<u>sid</u>	sname	rating	age
22	dustin	7	45.0
